Begin by adding the Advanced option in Printer & Scanners. This only needs to be done once.

1. open Systems Preferences / Printers & Scanners

2. Click on the + button
3. CTRL-click any of the icons in the menubar and select **Customize Toolbar**...

1. from the new window drag the Advanced gear icon to the menubar above and Click Done
Once you have the Advanced option to add printers:

1. Click on the Advanced
2. When the Advanced window loads choose 'Windows printer via spoolss' as the Type
3. In URL: enter smb://172.18.168.64/Printer Share from table below

4. In the Use dropdown list select "Select Software..."
   1. Search for the printer that matches the name you chose in the table below and click OK
   2. Click on Add and setup any special settings as described in the table below then click OK

5. CTRL-click on the printer you just created and choose "Rename printer..."
   1. Type a familiar name for the printer so that you can find it later
